Variable Name Conventions

Convention	Description
Camel Case	Use camel case for variable names (e.g., `string thisIsCamelCase;`).
Descriptive and Meaningful	Choose names reflecting the variable's purpose (e.g., `bool orderComplete;`, NOT `bool isComplete;`).
Whole Words	Use entire words for clarity in variable names (e.g., `decimal orderAmount;`, NOT `decimal odrAmt;`).
Avoid Data Type in Name	Exclude data type from variable names (e.g., use `string firstName;`, NOT `string strMyValue;`).
